Top Lining Options

Basic polyester
fabric

Breathable Mesh
Reduce sweat, bacteria and
smells (preferable advantage)

Final Notes

1. Main material: Sorbothane or similar that absorbs impact and prevents bouncing or rebound. Possible alternatives: Mix materials, bottom sorbothane and top memory foam, or similar materials, that can not only absorb impact but create some comfort.
2. Shape: Similar to Nike Solarsoft reference, without molds, branding or any mark, as shown in pictures and graphics. With some arch support.
3. Top lining material: Preferably some breathable, anti-fungal or bacterial materials and fabric to avoid heating but mostly avoiding smells. Any material able to make that claim is welcome. Even if it's a washable material can be a good selling point.
